Title: Mars Odyssey  
Genre: Simulation  
Developer:  
Steel Wool Studios  
Publisher:  
Steel Wool Studios  
Release Date: 8 Sep, 2016

b4d347fde0

**Minimum:**

**OS:** Windows 8

**Processor:** Intel i5-4590 or greater / AMD FX 8350 or greater

**Memory:** 16 GB RAM

**Graphics:** NVIDIA GeForce GTX 970 / AMD R9 390

**DirectX:** Version 11

**Storage:** 5 GB available space

---

Amateurish and just not enjoyable.  
It's undetailed, low res and boring.  
It may have been "cool" when VR was all new and such..

On top of that, there is no odyssey at all. What a misleading game title!  
It's just some "tech demos" levels you're skipping through and the game mechanics are minimalistic.  
I didn't feel like being on mars at all.. Small, short game that matches its discounted price well. It's half an hour worth spending.  
It's more like an impressive educational app than a game, but will sure spark some interest in our journey to Mars. While the almost non-exist "gameplay" part is underwhelming, it did prompt me to search how Opportunity cleans its dust on solar panel after blasting the dust off in game. Yeah, it's a shame that I don't know the secret of long lives of Mars rovers until now.  
However, to my defense, I wasn't closely following them 12 years ago after the initial excitement of Spirit and Opportunity's successful landing. Downloading a tiff from NASA took me almost an hour on a modem link in China back then. Now with half an hour, I am appreciating a real-sized Opportunity and Curiosity on Mars. What a time to be alive!

Valve's Destination showed me Curiosity in VR first. Mars Odyssey let me touch a few instruments and see what they are. Now, just wait for a while, I am sure I will be able to actually use those instruments to do some great science on Mars!

Well executed. Consider this as 'The Blu in space'. :)

Really enjoyable demo of how VR should work.

Not much replay value - but immersive and a lot of fun.

Recommended.. Mars Odyssey is short and straightforward but it is stronger because of it. You check out a space station then repair some robots on Mars. Along the way I learned a little about Mars and the real robots who have been exploring it on our behalf. Most importantly, I got lost in the experience and by the end I was excited about the future of our species on Mars and among the stars. This is not a game but as an educational experience, I loved it.. Real short, not bad little vr educational experience.. Quite frankly, this was one of the best vr experiences I've had to date.

Excellent visuals, interesting bits of info, and a great teleport system.

The funniest part is that, to me the most impressive thing was the helmet visuals and physics.

\*Edited for grammar.. About 30 min of fun Mars exploration.

---

If you like space, Mars or exploration you should try this!. I bought this game because of my intrests in astronomy. It met some of my expectations but there are few things that could be improved. I like the game mechanics but it feels like a game made for children. There is no proper excitment. The most fun part about it was (spoilers) driving the tiny rover. It ended too quickly for me but I like the fact that you can travel to previous visited places. I don't think it's fully ready yet so I will not recommend this. I'm sorry to say this, but it does have some potential. I'm gonna keep it for the time being and let's see where this goes.

---

This has the potential of being a good educational interactive experience for 6-14 year olds but not much more. It has a lot of bugs and is boring in its current state. The textures are very low-res compared to all of the imagery that is available from NASA. The rocks look like they are made from styrofoam. The teleporting is slow and not always accurate. The landers and hologram of mount olympus were decent. Driving the rover with the dust storm was the best part of the experience, until the dust storm dissapeared.. <https://www.youtube.com/watch?v=9Ry6cEUbgq0>. Don't expect too much from this, it was well made, but a simple visit to various Mars landers with very simple interaction tasks at each one.

The dust storm was nice.

As long as you understand this is a fairly simple and educational (to a point) Mars immersion app, then it's worth the discounted price I paid.

. Very short and more informational than entertaining. Still fun, but wouldn't spend money on this.. Vary cool, need a full version. I could spend hours playing a game like this
